

# CLASS THREE

Class Three have had a very busy autumn term with all their learning. We have had many fantastic opportunities including multi skills at JFAN, tennis with Ms Dunlop, music with Mr Malam, PE with Mr Snelling & Mr Dyce, Friendship Week, learning about Ancient Egypt, improving our place value skills in maths, focusing on One Kind Word and Speak Out, Stay Safe in PSHE. We have worked hard to improve our presentation in all aspects of the curriculum and enjoyed our science, English, computing, RE, DT and French lessons.

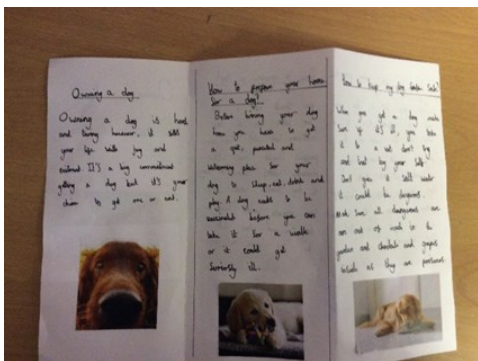

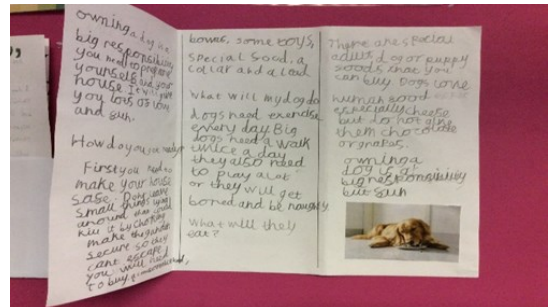

## CLASS FOUR

Class 4 have had a busy and productive term! In English we have completed work on a short film called 'The Present'. This has led us to write stories in which the main character has a change of heart about something and to produce information texts that inform people considering getting a dog how to look after them. We then turned these into leaflets.

In art we have completed our William Morris designs. We have worked hard to engrave the designs onto our polystyrene tiles and used printing ink and rollers to make a repeated pattern. It was quite a tricky process as the polystyrene is quite fragile however we all managed to successfully print our work. We will be adding a second layer of colour to finish off in the new year!

In history we have been learning lots about the Victorians. We learnt about the jobs that children have to do and the terrible conditions involved. We wrote about what life was like for children within each of these jobs.

Continued...

...Class 4 continued ]

We've had a very hands-on term of science. We learnt about electricity and built many types of circuit. We have also learnt about the digestive system and most recently conducted in an experiment on teeth-investigating which liquids effected the surface layer the most. We used eggs to represent our teeth as their shell is like the enamel of our teeth. We found that the energy drink caused the most damage eroding the surface layer whereas water had no visible effect. Coffee and cola both caused significant staining to our teeth. Alongside this experiment we looked at the difference made to 'teeth' that had been brushed first. We brushed our teeth and placed them into the same liquids for the same amount of time and found that the toothpaste had lessened the damage.

Finally, in French we have been learning about food and how to ask for different drinks, breakfasts and **sandwiches**.
